ABSTRACT:

CHG DATE=20000802 STATUS=O> There is provided a fermented milk product that contains lactic acid bacteria capable of producing a large amount of lactotripeptide and a large amount of active ingredient having hypotensive activity and anti-stress effect, and that can be taken pleasantly as foods or beverages. Lactic acid bacteria of Lactobacillus helveticus having specific bacteriological properties, the bacteria, when cultured in a medium of animal milk containing 9wt% solid of non-fat milk, producing tripeptides Val-Pro-Pro and Ile-Pro-Pro in an amount of 60 μ g in terms of Val-Pro-Pro per ml medium, and the bacteria exhibiting extracellular proteinase activity of not lower than 400U/OD590. Lactobacillus helveticus CM4 strain (deposited at National Institute of Bioscience and Human-Technology Agency of Industrial Science and Technology, deposition number FERM BP-6060). A fermented milk product obtained by fermenting an animal milk with these lactic acid bacteria.

ABSTRACT:

PROBLEM TO BE SOLVED: To obtain lactic acid bacterium strain capable of producing lactotripeptide in large amounts and fermented milk product containing a material having vasodepressor activity and stress alleviating action in large amounts and capable of readily drinking and eating.

SOLUTION: This lactic acid bacterium belongs to Lactobacillus helveticus, preferably Lactobacillus helveticus CM4 strain (FERM BP-6060). This fermented milk product is obtained by fermenting an animal milk with the above lactic acid bacterium. The lactic acid bacterium and the fermented milk product each have specific mycological properties and produce tripeptide Val-Pro-Pro and/or Ile-Pro-Pro in an amount of $\geq 60 \mu\text{g/m}$ expressed in terms of Val-Pro-Pro and exhibit $\geq 400 \text{ U/OD590}$ extracellular protease activity when the bacterium is cultured by using animal milk containing $\geq 9 \text{ wt.}\%$ solid non fat as culture medium.
